

ASSEMBLY INSTRUCTIONS

WARNING!

Do not operate the mechanisms before completing the installation of the backrests.

INSTALLING THE BACKRESTS

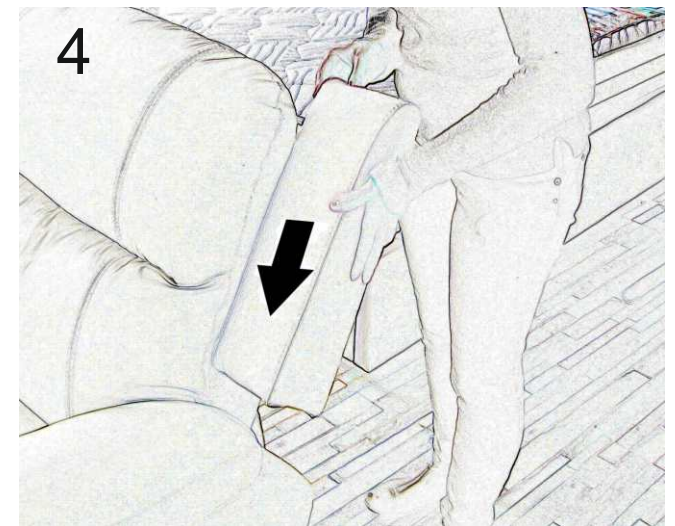

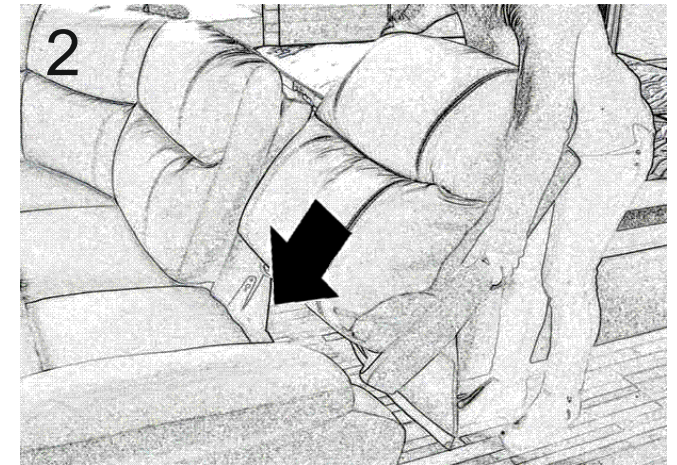

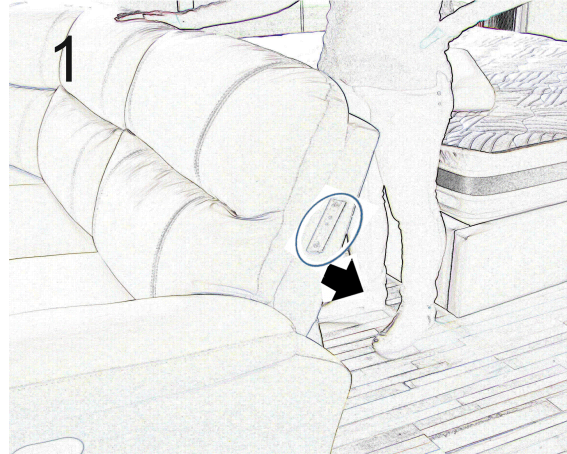

1. The end backrests are equipped with slide-in brackets facing out towards the armrests. Ensure that they are positioned correctly.

2. While holding the backrest in an upright position, lower it towards the seat so that the two male plates fixed to the seat slide simultaneously into the female brackets located at the bottom of the backrest.

3. Push the backrest down so that the two brackets click into a locked position.

Repeat the same procedure with each of the backrests.

4. Mount the end pieces of the end backrests using the slide-in brackets as indicated in Pic. 4.

INSTALLATION OF ELECTRICAL COMPONENTS (APPLIES TO UNITS EQUIPPED WITH ELECTRICAL GEAR)

WARNING! Always ensure that cables run clear of the path of moving parts. Do not allow the cable to get caught the metal base.

WARNING! Do not connect to the power grid if any of the components appear damaged.

1. A connecting cable and an electrical adapter are provided to power the electrical function.

2. Connect the adapter to the electrical gear of the unit using the cable connection. Lock the cable connection as indicated.

3. Plug the connecting cable into the electrical adapter.

4. Plug the other end of the connecting cable into the power supply with a voltage of AC100-240V.
